

# ARCTIC FUEL HEATER

FOR 12 V AND 24 V ELECTRICAL SYSTEMS

MORE CAPACITY AND RELIABILITY FOR AUXILIARY HEATERS!

Arctic Fuel Heater (AFH) is a pre-heater for fuel in diesel-operated auxiliary heaters. It is compatible with Webasto, Eberspracher and Ardic auxiliary heaters.

Arctic Fuel Heater ensures that the heater is always supplied with adequately warm fuel. This way, the heater will burn in a clean, smoke-free way even in the lowest temperatures. Thanks to the cleaner burning process, sooting is reduced, which means that the heater will need less maintenance and its operational reliability will improve.

The cleaner burning process also reduces harmful emissions.

AFH ensures the operation of auxiliary heaters when most needed.

Technical details:

- 12 and 24 V are both CE marked versions
- Measurements (DxWxH): 53 x 33 x 125 mm
- Weight: 390 g

AFH saves time, trouble and money
